Slipsheet Overlay Benefits:

- Leave old surface in place
- Elimination of material disposal makes the project environmentally responsible
- Start with stable subsurface
- Stable subsurface will allow for optimal compaction of asphalt surface course. Optimal compaction is the single most important factor in the longevity of the tennis court surface.
- Raising the court 6" eliminates drainage issues towards court
- End result is a very plane tennis court playing surface.

Scope of work:

- Replace tennis court net post footings
- Fill cracks
- Install 2" x 6" pressure treated wood edging
- Install 2" of dense graded aggregate
- Install 2" asphalt base course
- Install 1 1/2" asphalt surface course
